

26. Project: Renovation of Sulaymaniyah Burn and Plastic Surgery Hospital

The health facilities in Sulaymaniyah governorate are under huge pressure resulted from the increasing numbers population and beneficiaries, as in addition to the host community, they are providing services to the IDPs and refugees as well, in addition to the big financial crises in KRI and Iraq as a whole, an issue that limits the ability of these facilities to respond to the needs of the beneficiaries and accommodate with the situation.

Sulaymaniyah Burn and Plastic Surgery hospital is one of the oldest hospitals in Sulaymaniyah, established more than 90 years ago. It is providing the services for different victims of wide ranges of accidents burns in addition to performing the plastic and reconstructive surgical interventions for the patients with congenital and acquired deformities and malformations.

The increasing load and pressure on the facility from the growing needs of the beneficiaries, in addition to the exhausted facility building, make it obligatory to improve the service provision in the hospital through supporting the different branches and departments in the hospital.

As a continuation for the efforts to support Sulaymaniyah Burn and Plastic Surgery Hospital, Heevie Organization, and by the support of WHO, has started a project for performing renovation and rehabilitation of the hospital through performing rehabilitation and renovation of the pediatrics wards and the outpatients' consultations department, in addition to the pharmacy and warehouse.

To be mentioned, after finalizing the project activities and in a special ceremony attended by His Excellency the Consul of the United States of America at Erbil, Dr. Ahmed Zueiten, World Health Organization Representative in Iraq, Dr. Haval Abu Bakr Governor of Sulaymaniyah and Dr. Sabah Hawrami Director General of Health in Sulaymaniyah Governorate, to inaugurate the departments that were expanded and renovated in Sulaymaniyah Burns and Plastic Surgery Hospital.

The project was implemented by the engineering department of Heevie Organization with the support of World Health Organization during which Heevie used the most updated medical standards and the high-quality materials.
