

29. Project: Training and capacity building of the health staff

The training and capacity building of the health staff is considered of the most important activities implemented by Heevie Organization. It aims to prepare a qualified medical staff so that they will be able to deal with patients in an optimal manner, leading to an obvious improvement of the healthcare services provided within the various health facilities.

In this field, Heevie Organization is implementing an integrated project to train the medical staff working within its projects and centers, which is done through including them in strengthening courses that covers various medical topics, especially those that are encountered in important medical departments and institutions.

This project is implemented by Heevie with the support of the World Health Organization and in cooperation with the General Directorate of Health in Dohuk Governorate, and includes theoretical aspects and practical application in the most important hospitals in Dohuk governorates, including Heevi Pediatrics Hospital, Azadi Teaching Hospital and Dohuk Emergency Hospital and within different branches like the reception and emergency department, inpatient wards, intensive care unit, cardiac care unit and neonatal intensive care unit.

During 2022, 171 medical staff were trained within the project through 100 training courses that covered several medical topics for the period of 12 months.
